HOUSING MARKET INFORMATION

HOUSING NOW

Saint John, Moncton CMAs and Fredericton CA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Second Quarter 2014

Highlights

- First quarter rental market construction activity in New Brunswick's three urban centres was minimal in 2014.
- Year-over-year, combined single-detached starts in Fredericton, Moncton and Saint John were up slightly in Q1.
- Fewer first quarter MLS® sales were recorded in all three of the province's urban centres in 2014.

Source: CMHC

*SAAR: Seasonally Adjusted Annual Rate

The seasonally adjusted annual rate (SAAR) is a monthly figure for starts adjusted to remove normal season variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

New Home Market

Housing starts in New Brunswick were trending at 1,866 units in March according to Canada Mortgage and Housing Corporation (CMHC). The trend is a six month moving average of the monthly seasonally adjusted annual rates (SAAR) of housing starts. Despite a positive showing in single-detached starts during the first quarter of the year, overall residential construction activity has continued to trend lower due to reduced levels of multi-residential construction in provincial urban centres.

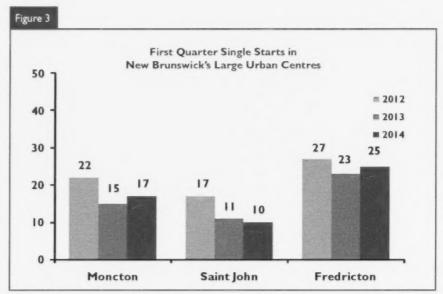

During the first three months of 2014, the Moncton CMA was the only large urban centre to record any rental market construction activity with a total of 16 apartment starts. This was similar to last year, when Moncton was also the only large urban centre to record apartment starts during the first quarter. It should be noted, however, that apartment starts were considerably higher last year, with 143 units on record in the quarter. This substantial decline early in the year will likely exert a downward pull on the overall number of multiple starts in Greater Moncton at the end of 2014.

The year-over-year decline in multiple starts stems from last year's above average construction activity that resulted in 611 apartment completions in the Moncton CMA. Also, an additional 359 units were still under construction as of the end of the year. This level of activity, combined with a steadily rising vacancy rate that reached 9.1 per cent in the fall of 2013, highlights a growing supply of units in the local rental

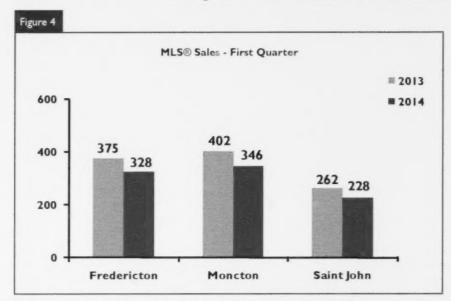

universe. Developers have increasingly been deterred by these challenging market conditions in 2014, resulting in the substantial drop in construction activity observed in the Greater Moncton rental market during the first quarter.

In Fredericton, recent rental market trends, particularly apartment starts and rising vacancy rates, have been similar to those observed in Moncton. The totals for units completed and under construction at the end of 2013 in Fredericton were 312 and 287 units, respectively. This activity resulted in there being no additional rental starts in the Fredericton rental market during the first quarter of 2014.

In Saint John, rental market construction in recent years has trailed the level established in the province's two other large urban centres due, in part, to the absence of population and employment growth. Relatively weak demand for rental units has resulted in a persistently high vacancy rate, limiting the expansion of the local rental universe. This trend remained true during the first quarter

of 2014, when no apartment starts were recorded.

Construction activity in the semidetached market increased during the first quarter of 2014. In Greater Moncton, semi-detached starts were up to 18 units during the quarter, compared to 10 starts during the same period last year. With the lowest number of semi-detached completions since 2005 recorded last year, the stronger start to the year in 2014 was not unexpected as semi-detached units continue to provide homebuyers with new homes at a lower price point than single-detached homes. In both Fredericton and Saint John, where semi-detached units typically account for a smaller share of new housing, starts were limited to two and six units, respectively, during the first quarter of this year.

In the single-detached market, starts were comparable to last year's first quarter totals in all three of New Brunswick's large urban centres. A minimal one unit decline in Saint John was offset by modest increases in both Fredericton and Moncton.

Existing Home Market

During the first three months of 2014, MLS® sales in all three of New Brunswick's large urban centres trended lower compared to the same period last year. The declines recorded in all three centres were comparable, ranging from a low of 12.5 per cent in Fredericton to a high of 13.9 per cent in Moncton. The year-over-year decline in first quarter MLS® sales in the Greater Saint John area stood at 13 per cent.

The reduced resale market activity observed in both Moncton and Fredericton stems mostly from a combination of higher than average inventory levels and reduced inmigration. While Fredericton and Moncton will continue to see rising population levels in 2014, netmigration gains have cooled in recent years as the sluggish performance of the provincial economy and lack of job growth has fuelled rising outmigration, and reduced demand for existing homes. In terms of housing supply, increased competition from the rental market as well as other

homeowner products, such as new semi-detached units, has contributed to the recent decline in MLS® sales in the province's large urban centres as consumers benefit from a wide array of housing choices.

In Saint John, residential construction activity during the past decade has been more closely aligned with existing demand compared to either Fredericton or Moncton, in large part due to relatively weak population gains during this period. As such, the resale market in Saint John has not been subject to increased competition from either an over-supplied rental market or rising levels of completed and unabsorbed semi-detached units, was the case in Greater Moncton. The recent decline in MLS® sales has been the result of softer demand stemming from a rise in out-migration and low employment growth.

In the years following the peak in MLS® sales observed in all three large urban centres in 2007, overall price growth has trended downward on an annual basis. Last year, fluctuations in the MLS® sale price ranged from a 2.1 per cent decline in Fredericton to a 2.9 per cent increase in Saint John. In Greater Moncton, the increase in the average MLS® sale price for the year was limited to 1.0 per cent. In all three centres, new listings continue to remain high in historic terms. The ample supply of available homes and weaker demand that has extended into 2014 has limited price growth in the first quarter of the year. In Greater Moncton, the average first quarter MLS® sale price was down 1.3 per cent at \$155,816.A 7.9 per cent price increase in Moncton City proper was offset by significant declines in both Dieppe City and the Town of Riverview, where the average MLS® sale price was lower by 12.5 and 17.5 per cent, respectively.

In Greater Fredericton, one of the highlights of the resale market during the first quarter of 2014 was the 6.9 per cent increase in the average MLS® sale price to \$179,347. The strong first quarter performance stemmed from an increased number of transactions in the higher price ranges in Fredericton City proper where the average MLS® sale price for the quarter was up 6.6 per cent to \$201,613.

In Greater Saint John, the average MLS® sale price for all major submarkets except for Saint John City was lower during the first three months of the year. Despite the fact

that Saint John City proper accounted for approximately 43 per cent of all first quarter MLS® sales, the 14.9 per cent increase in the average MLS® sale price was not sufficient to generate an overall first quarter increase for Greater Saint John. The decline was due to fewer homes being sold in the upper price ranges in the Rothesay/Quispamsis area, where the average first quarter MLS® sale price was down 11.1 per cent. Despite the lower average price, Rothesay/ Quispamsis was the highest priced submarket, on average, in the province during the first quarter at \$239,065.

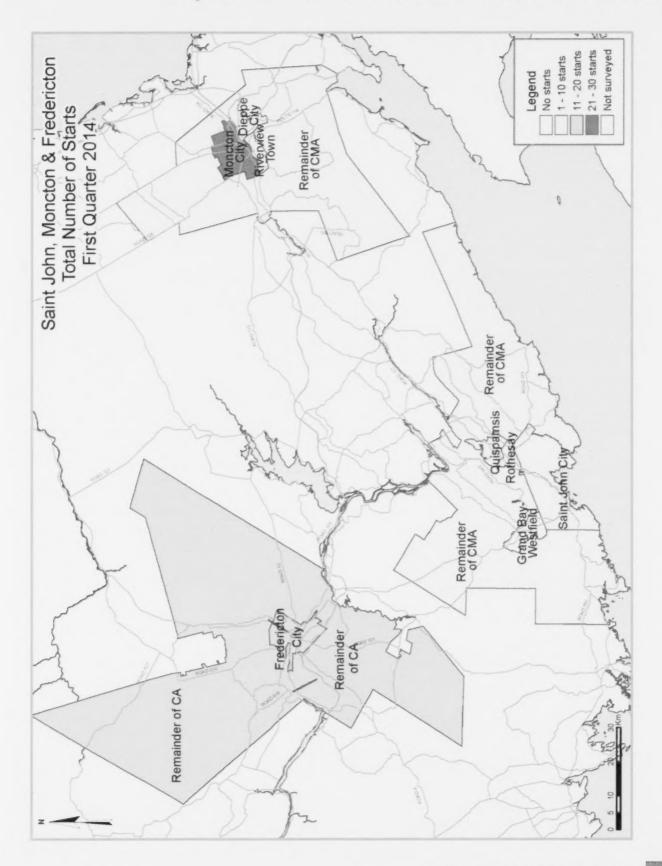

Single-Detached Starts Maintain a Downward Trend:

In New Brunswick's three large urban centres combined, single-detached starts peaked at 1,681 units in 2003. In subsequent years, single starts have consistently trended lower. Last year, single starts in Fredericton, Moncton and Saint John totalled 716 units. This was the lowest combined total on record since 1982.

The decline in single-detached construction can, in part, be attributed to the price differential between building a new home and purchasing an existing home. For consumers opting for the resale market in 2013, the average MLS® sale price in the province's large urban centres ranged between a low of \$160,681 in Greater Moncton to a high of \$176,194 in the provincial capital of Fredericton. In Saint John, the average MLS® sale price was slightly lower at \$175,182.

Despite the variations in price points in individual markets, purchasing an existing home is more accessible to consumers, on average, than building a new single-detached home. In terms of new home construction in New Brunswick's large urban centres, the lowest average price of absorbed single-detached units was recorded in Fredericton last year at \$266,806. In both Moncton and Saint John, the average prices were higher, but comparable at \$313,181 and \$314,255, respectively.

Additional competition for single-detached homes can also come from other home types, such as semi-detached and row units that offer a lower priced alternative to the traditional single-detached home. This ongoing shift in consumer patterns has also contributed to the reduced demand for newly-built single-detached homes, as evidenced by the current decade long downward trend in single starts.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "start", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "completion", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A "Single-Detached" dwelling (also referred to as "Single") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "Semi-Detached (Double)" dwelling (also referred to as "Semi") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "Row (Townhouse)" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "Apartment and other" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
